

## GP4 Peer Review Form

Group name: Engeo Reviewed by: Backend

**Have the team show you their SQL:**

**Reservations:** Does the query take into account the other reservations that intersect with the requested time frame. Does the price calculation take into account the season and the day of the week?

Yes it does. The price ~~each~~ is calculated when the bill is generated.

**Check-in:** Does the query for available rooms of a specific type take into account whether or not a room is occupied and whether or not a room is clean? Do the team's assumptions about how occupied/clean data get into their system make sense?

Yes it is intuitive

**Check-out:** Does the query include all the information necessary to create a bill - the room(s) price per day, the guest category, and the extra services?

Yes it does, just the server-side isn't working

**Extra Service:** Does the query return all the information needed for the user to choose to purchase an extra service?

It searches for food orders for bill IDs

Try each of the GUIs available, entering different search data:

- Reservation Draft - data being pulled just not appearing
- Check-in Working
- Check-out Draft - data being pulled just not appearing
- Extra services Working

### Self Assessment

- Have you pushed today's version to github?

Yes

- Do you have each of the GUIs working? Write the current state of each of the parts using a rough classification:

- **Not started** - you have not started this component
- **Temporary** - you have some code there to get it to run, but nothing like the final code should be
- **Draft** - you have realistic code but it is unfinished
- **Close to final** - it is near to a final state with just a few issues to fix/finish

- **Reservation:** ~~close to final~~

- SQL: Done
- Functional web interface: close to final

- **Check-in:** ~~close to final~~

- SQL: Done
- Functional web interface: close to final

- **Check-out:** ~~close to final~~

- SQL: Done
- Functional web interface: close to final / draft

- **Extra service:** ~~close to final~~

- SQL: Done
- Functional web interface: close to final

## Reflection

After hearing comments from your peers and instructor, what areas in your full system do you plan to revise?

- Seasons + day prices w/ room
- update reservation input to click on ~~add~~ calendar dates
- Displaying all orders in query 4 not orders on bill
